3D AutoCAD add-on products, such as 3D Architect, contain no AutoCAD technology, but use the format's features for 3D modeling. Autodesk Resolve is a professional 3D content creation and publication application. It is a 3D content creation application, like 3ds Max, which uses the same software rendering engine (Autodesk RealSense) as AutoCAD. Resolve was initially included as a free application with AutoCAD 2013, but is now a separate application. It features 3D models, rendering, animation, and other 3D content creation features. Is there a way to remove this output or clear the excel input cell before the call? A: You can use the Application.Volatile Property. This will stop VBA from using the Application.WorksheetFunction object. Try the following instead: Function Step(ByVal c2 As String, ByVal c3 As String) Step = Application.WorksheetFunction.VLookup(c2, Range(rng), c3, vbxlLookupMatch) End Function When you say debug you mean that you want to actually see the output? If so, you want to look at the immediate window: Use the Debug>Windows>Immediate Window to execute commands or for the Immediate window to be active in the IDE. Update: Since you want to see the output in the cell you are calling the function from then you can use the Debug.Print Command. When you press F8 it will show the Output in the Immediate window.
